

1. Make sure your static IP script is created and executable

vi /etc/init.d/start-my-docker

1.1 Paste this content

```
#!/bin/sh

# Get container ID by name
CID=$(docker ps -aq -f name= cpu-monitor-container)

# Check if container ID exists
if [ -n "$CID" ]; then
    echo "Container ID: $CID"
    # Example: run a command in the container
    docker start -i "$CID"
else
    echo "Container not found!"
fi
```

1.2 Make it executable:

```
chmod +x /etc/init.d/start-my-docker
```

2 Create a systemd unit:

vi /etc/systemd/system/start-docker-service.service

2.1 Paste this content

[Unit]

Description=Start My Docker Container

After=docker.service

Requires=docker.service

[Service]

Type=simple

ExecStart=/etc/init.d/start-my-docker

Restart=always

[Install]

WantedBy=multi-user.target

2.2 Enable and reload the service:

```
chmod +x /etc/systemd/system/start-docker-service.service
```

```
systemctl daemon-reload
```

```
systemctl enable start-docker-service.service
```

3 Reboot

4 Verify

The docker service should be up and running.
